

# **MATHEMATICAL SCIENCE**

**FOR STATISTICAL ANALYSIS MODELS**

**Nirajkumar Patil**

Sr. DATA SCIENTIST  
(BE, MSc Mathematics)

# CONTENTS

---

- 1. Introduction**
- 2. Feedback**
- 3. Linear algebra**
  - a. Matrix operation
  - b. Matrix inverse
  - c. Linear system
  - d. Eigen values and eigen vectors
  - e. Rank of Matrix
  - f. Matrix Decomposition
  - g. Vector spaces
  - h. Vector subspace
  - i. Vector algebra
  - j. Linear Mapping
- 4. Complex Analysis**
  - a. Complex number
  - b. Complex Plane
  - c. Polynomial
  - d. Hyperbolic function
  - e. Analytical function
  - f. Cauchy's -reimann equation
  - g. Contour integral
  - h. Cauchy's theorem
  - i. Cauchy's integral
- 5. Algebra**
  - a. Permutation and combination
  - b. Group
  - c. Sub group
  - d. Quotient group
  - e. Homomorphism
  - f. Cyclic group
  - g. Permutation group
  - h. Cayley's theorem
- 6. Ordinary and Partial Differential Equation**
  - a. Existence and uniqueness
  - b. 1<sup>st</sup> order diff eq.
  - c. 2<sup>nd</sup> order diff eq.
  - d. Higher order diff eq.
  - e. Lagrange's and Charpit method
  - f. Laplace equation
  - g. Heat and wave eq.
- 7. Probability and distribution**
  - a. Sample space
  - b. Simple Probability
  - c. Dependent and independent probability

- d. Conditional probability
- e. Poissons distribution
- f. Binomial distribution
- g. Chi square distribution

## **8. Statistics**

- a. Types of data
- b. Types of Sampling
- c. Central tendency
- d. Mean Mode Median
- e. Importance of hypothesis
- f. One tail, Two tail test
- g. P-test
- h. Z-test
- i. T-test
- j. Chi Square test
- k. ANOVA
